LOCAL HISTORIC DISTRICT: Dilworth

PROPERTY ADDRESS: 1707 Lennox Avenue

SUMMARY OF REQUEST: Window replacement (sash kits)

APPLICANT/OWNER: Catherine Van Doninck, owner

Details of Proposed Request

Existing Conditions
The existing structure is a one story brick duplex constructed in 1930. The building has wood windows and small front porch with metal supports. Adjacent structures are commercial and residential.

Project
The project is the replacement of window sashes around the house. The applicant has supplied information regarding the condition of the windows and details of the proposed sash kits (Windsor, replicate of existing patterns and dimensions).

Design Guidelines-Trim, page 4.11
1. Repair rather than replace existing historic trim, matching original materials, details and profiles.
2. Match deteriorated trim with new trim to match as closely as possible in material, details and profiles. Do not remove elements that are part of the original design of the structure without replacing them in-kind.
3. Replace missing trim based on physical evidence. Do not replace original trim with material that conveys a different period of construction or architectural style.
4. Avoid using substitute materials such as fiberglass, composites, and PVC type products when repairing or replacing historic wood elements.

18. Give depth and profile to windows by using true divided lights, or three-part simulated divided lights with integral spacer bars and interior and exterior fixed muntins. Small variations such as the width and depth of the muntin and sash may be permitted if those variations do not significantly impact the historic characteristics of the window design. Clip-in/false muntins, flat muntins and removable external grilles are not allowed.
19. Replace a wood window with a wood window when possible. Wood-resin composite, aluminum clad wood, or fiberglass windows that meet these guidelines may be considered on a case by-case basis. Requests for vinyl windows must be reviewed by the full Historic District Commission.

Staff Analysis - The Commission will determine if the proposed replacement windows and trim meet the guidelines.

Application of the Historic District Guidelines: Historic District Guidelines, Section 4, Rehabilitation Building Elements, items 10-21
10. Replace entire windows only when they are missing or beyond repair.

All the existing windows have been evaluated and each window's condition has been documented; see addendum A attached.

11. To determine if replacement windows are necessary, first survey existing window conditions by noting the number of windows, whether each window is original or replaced, the material, type, hardware, and finish, the condition of the frame, sash, sill, putty, and panes, in order to clearly gauge the extent of rehabilitation or replacement necessary. See Section on Energy Conservation at the beginning of this chapter.

It has been determined that most of the windows are missing putty, rotted, inoperable, and sashes deteriorated. Examples noted in Addendum B.

12. If only the original sash are badly deteriorated, explore using sash replacement kits and retain existing wood window frames. This approach reduces potential damage to the surrounding interior and exterior historic materials.

Full sash kits have been determined to be the appropriate action to replace the current deteriorated windows. The Windsor sash kit product mimics the existing windows as close as possible without altering the historical integrity of the home.

13. Maintain the original size and shape of windows. Thin sash frames rarely maintain the overall appearance of historic sash. Every window will be measured, and special order windows, sash kits only, will be ordered.

14. Match window replacements to the height and width of the original openings.

All existing openings will be maintained including height and width.
15. Retain the appearance of a double-hung window whether one or both sashes are operable. All windows are double hung 6 over 6, 8 over 8 or 10 over 10. Replacement sash kit windows will be double hung 6 over 6, 8 over 8, or 10 over 10 as per existing divided light arrangement.

16. Do not reduce the glass surface area. No glass surface will be lost. Windsor sash kit replacement is almost an exact replica of window size and glass exposure.

17. Maintain the original number and arrangement of panes. Windsor Sash Kit will maintain the existing 6 over 6, 8 over 8 or 10 over 10 true divided light.

18. Give depth and profile to windows by using true divided lights, or three-part simulated divided lights with integral spacer bars and interior and exterior fixed muntins. Small variations such as the width and depth of the muntins and sash may be permitted if those variations do not significantly impact the historic characteristics of the window design. Clip-in/false muntins, flat muntins and removable internal grilles are not allowed. Windsor Sash Kit will be true divided lights, 6 over 6, 8 over 8 or 10 over 10, with fixed muntins that match as close as possible to watch is currently existing.

19. Replace a wood window with a wood window when possible. Wood-resin composite, aluminum clad wood, or fiberglass windows that meet these guidelines may be considered on a case-by-case basis. Requests for vinyl windows must be reviewed by the full Historic District Commission. Windsor Sash kit is a wood product.

20. Use translucent or low-e glass. Low-e glass will be used.

21. Paint windows in a historically appropriate paint color. Windows will be painted a white color.
Addendum A:
Existing Windows
Total of 13 windows will be replaced with Sash Kits
Addendum B:
