

Midtown Morehead Cherry Area Plan Market Analysis Charlotte, North Carolina

February 2011

Executive Report

Background

Noell Consulting Group (NCG) was retained by the Charlotte-Mecklenburg Planning Department to conduct a market analysis in support of planning efforts for the Midtown-Morehead-Cherry Area, a highly diverse area with significant strategic characteristics that make it attractive as an area to live, work, and shop. Specifically NCG was tasked with identifying demand potential for residential (both for-sale and rental) and commercial (office and retail) uses in the study area, the timing of that potential, locations where demand could best be satisfied, and key issues impacting demand in the coming two decades. The following summaries the results of our research and analysis relative to these goals.

Study Area Situation

The Midtown-Morehead-Cherry study area is very well positioned for growth and development in the coming years and enjoys many of the attributes sought after by a variety of market audiences. A map of the study area can be found on the following page, with its key attributes being provided below:

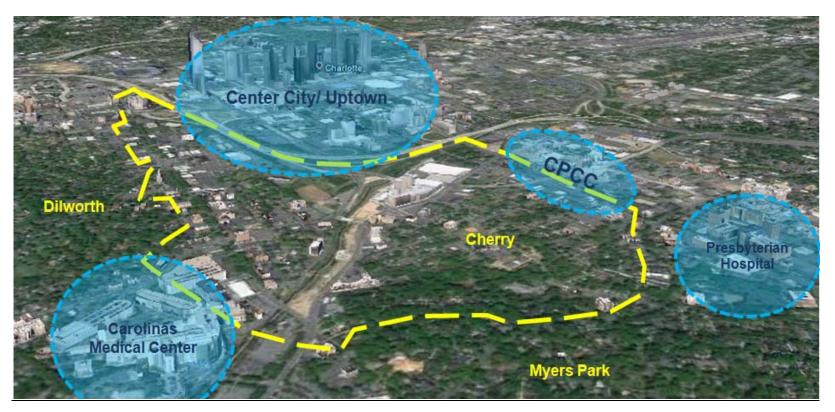

- Convenience: Located within minutes of Center City, Carolinas Medical Center, Presbyterian Hospital and other major employment concentrations;
- Existing retail shopping anchor through Metropolitan Midtown;
- Strong neighborhood orientations, with Dilworth, Cherry, and Myers Park all providing adjacency to many potential development sites;
- Access to local restaurants, bars, and retail, although most of these uses are outside of the study area;
- Great skyline views from many underutilized properties, an attractive selling point for a variety of uses; and
- The Sugar Creek Greenway, which acts as a major park anchor for the study area and can be a focal point for residential development.

322 9th Street, Suite D, Atlanta, Georgia 30309 Ph: 404-724-0172 noellconsulting.com

CITY OF CHARLOTTE MIDTOWN-MOREHEAD-CHERRY MARKET ANALYSIS

Noe Consulting Group

Perhaps the most significant challenges can be found in the lack of a true sense of location within the study area, as it represents somewhat of a "tweener" location, largely lacking a character or identity unto itself (parts of the Cherry neighborhood being the exception). This in itself is an opportunity, as sufficient underutilized property exists in strategic locations to create that identity over time. Certainly the major investments being made by the City along the greenway have the potential to function as a spine for significant redevelopment in the area and create a greater sense of location. An additional challenge is the lack of large underutilized properties in strategic locations, meaning again, that creating an identity will need to occur at a smaller level over time.

CITY OF CHARLOTTE MIDTOWN-MOREHEAD-CHERRY MARKET ANALYSIS

Noe Consulting Group

Economic and Demographic Conclusions

The study area enjoys a large employment base from which to draw support for a number of land uses. In 2008 there were nearly 50,000 jobs in and adjacent to the study area, not including government workers and Center City employees. Overall employment growth in the area, while showing solid growth since 2000, has failed to keep pace with that of Mecklenburg County overall. As can be seen in the table below, the greatest growth in the study area has occurred in Institutional users, particularly Health Care, which alone accounted for the equivalent of 100% of the growth in the area overall (some sectors lost employees while others gained to net out). The hospitals and other medical employers indeed represent a major source of demand for housing across a spectrum of price points and formats from office space to retail and lodging uses.

| Sector | Industry | Midtown/South End/Elizabeth Change 2000 - 2008 | Mecklenburg County Change 2000 - 2008 | Midtown/South End/Elizabeth Area as a % of County |
|--------|--|---|--|--|
| | Total Growth | 2,664 | 61,365 | 4.3% |
| | Total, Moderate-Paying Employment | -1,487 | 5,572 | -26.7% |
| | Total, Higher-Paying, Office-Using Employment | 1,246 | 33,545 | 3.7% |
| | Total, Institutional/Office Emp. (Wide Range of Pay) | 3,000 | 25,716 | 11.7% |

White collar employment also showed positive growth during the period, albeit at a pace slower than that seen in the county overall. These jobs tend to be higher-paying and create demand for homes, condos, townhouses and apartments as well as office space and retail uses. Given the lack of large-scale office space in the study area, the majority of white collar firms in the study area tend to be smaller firms (under 5,000 square feet) in the professional service sector.

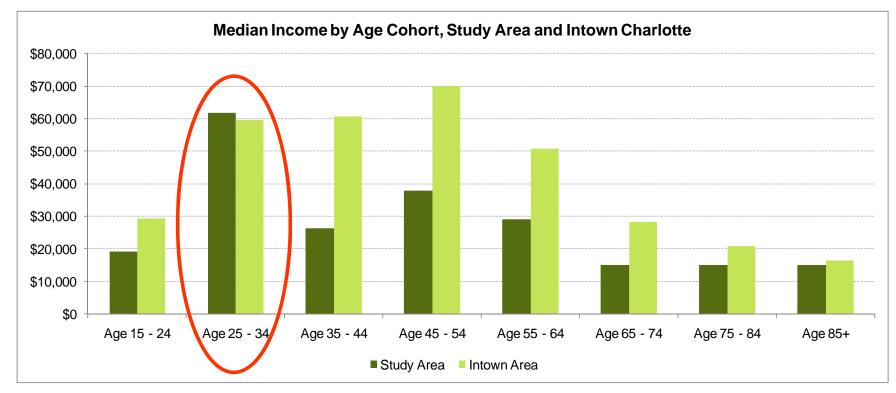

Finally, more moderate-paying employment, including retail, construction, and industrial-related employment, declined significantly during the decade as a result of increasing land values (forcing industrial users out), redevelopment of aging retail properties (Midtown Square), and the onset of the recession (construction).

This latter employment sector is unlikely to come back in mass given changing dynamics of the area. Regardless, the presence of this variety of job types and the wages they employ creates opportunities and potential for housing at all price points, an ability for many to walk or bike to work, and the support needed for new and expanding office and retail uses.

The study area itself has historically had a small population that skewed toward lower incomes. Indeed, when compared to Intown Charlotte (see Exhibit 3 for a map of the area), the prevalence of lower income households in the study area becomes apparent, with more than half of study area residents having household incomes below \$35,000; a price point that somewhat limits opportunities for new market-rate housing options.

Changes in the study area's household composition can clearly be seen in the incomes of some of its youngest residents--25 to 34 year olds-- a group which features a median income very much in line with that of Intown Charlotte (around \$60,000) and the most affluent group in the area. This younger group (generally defined as Generation Y), is one that increasingly values inner city locations for their walkability and convenience, social aspects and character and is highly evident in Intown Charlotte. Many are choosing the study area both as a location for new apartments, townhouses, and condominiums, as well as single-family homes in the Cherry neighborhood. This trend is likely to continue over time and the study area will gradually grow to resemble other Intown areas demographically; a positive and yet challenging issue relative to preserving affordable housing close-in.

CITY OF CHARLOTTE MIDTOWN-MOREHEAD-CHERRY MARKET ANALYSIS

Noe Consulting Group

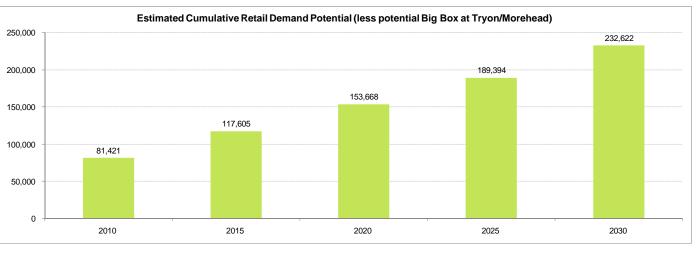

Retail Market Overview

Over the past decade the Intown Charlotte retail market has experienced solid growth, fueled by the return of higher-end housing to the inner city and the realization among major retailers that intown areas hold massive retail spending power that few have pursued in the last several decades. Evidence of this can be seen in Metropolitan Midtown's national tenant mix, the adjacent Target, and the Lowe's in South End. Evidence can also be seen in the Harris Teeter in 4th Ward and the resurgence of restaurants and bars in areas like Center City, South End, Plaza/Midwood, and NoDa. Increasingly national retailers are adjusting their suburban models to fit more urban environments; even Walmart is now pursuing vertically-integrated retail opportunities in Chicago and Washington, DC. This retail resurgence will resume as the recession eases in the coming years and market trends and preferences for street-oriented and mixed-use retail continue to grow.

Retail demand potential in Charlotte's Intown area is expected to remain strong in the coming decades, swelling to more than two million net square feet as the Intown residential base, employment, and visitation levels continue to grow. While the study area enjoys a location that positions it well to capture this demand from a location perspective, there is a lack of available strong retail sites within the study area, tempering the demand potential that can be captured within the study area itself. The area actually features few major thoroughfares traversing the study area and those that do typically feature

shallow lot depths or intersections where property is already "out of play" (e.g. hospital ownership). Other sites exist just outside of the study area, including the Elizabeth Avenue property held by Grubb Properties and opportunities in Center City for retail in vertically-integrated buildings.

Demand potential in the study area is therefore somewhat tempered in the coming two decades, with estimated net

demand growing to around 232,000 square feet by 2030, not including potential big boxes that could possibly land around the Morehead/Tryon intersection, an area on the fringe of the study area. Area residents, those living within roughly two miles of the study area, represent the greatest source of future demand potential for this retail, followed by employees working in the study area or in Center City.

Noe Group

Retail Opportunities

Three major retail opportunities will emerge in the study area over the next 20+ years:

- 1. Smaller, hospital-oriented retail uses around the Kings Drive/ Morehead Street intersection;
- 2. Intown resident-serving infill retail around Metropolitan Midtown, retail that could include a mix of restaurants and bars targeting CPCC students as well;
- 3. Potential big-box retail around the S. Tryon/ W. Morehead Street intersection where larger underutilized properties exist today.

In addition, some reformatting of existing retail is likely in the coming years as freestanding retail centers will likely be redeveloped into mixed-use projects with retail on the ground floor. Areas along Kings Drive in particular could convert over time.

Office Market Overview

The Midtown-Morehead-Cherry area is quite well-positioned to compete for a growth market of Near-Uptown companies seeking the proximity to Center City Charlotte, yet either seeking space for a discounted price or seeking space in a highly convenient, neighborhood-oriented, and creative environment. Included in this Near Uptown market are areas such as South End, Elizabeth, Midtown, and other newly-emerging office areas. Indeed, a number of build-to-suits have been developed along East Morehead and Metropolitan Midtown has been delivered with the largest offering in the study area to date.

Office tenants in these Near Uptown markets tend to be smaller, white collar services firms, with most occupying less than 5,000 (generally under 20 employees). This is indeed true of the study area, which also benefits from adjacency to two major hospitals and thus has also experienced strong

| Total | 2,857,000 sf | 531,800 sf | 81% |
|--------------------------|--------------|----------------|----------------|
| Duke Energy Center | 1,300,000 sf | 74,000 sf | 95% |
| NASCAR Plaza | 390,000 sf | 255,800 sf | 34% |
| Ally Center | 363,000 sf | 162,000 sf | 56% |
| 1 Bank of America Center | 750,000 sf | 40,000 sf | 95% |
| | Total SF | Est. Available | <u>% Occ'd</u> |

demand for medical office space.

The recent recession has combined with a poorly-timed delivery of five office buildings in Center City to create a highly competitive office market. While the damage from delivering three million square feet of space in a shrinking economy wasn't as bad as feared, Center City

Noe Consulting Group

still is saddled with more than two million square feet of vacant space; an amount that will temper demand for new office space for several years to come. This highly competitive situation also has significant impacts on the study area as the price alternative proposition Midtown and other areas have offered to Center City has been somewhat negated via concessions in Center City. As such, demand for office space in the study area will be tempered significantly in the next several years; largely limited to medical-related users seeking hospital proximity.

Longer-term, opportunities for office development in the study area are significant, particularly for those smaller firms seeking a greater lifestyle play or price discount to Center City, and those firms seeking hospital proximity. Over the next twenty years, we believe demand from those two firm types is expected to exceed 2.5 million in an area from South End to Elizabeth with one million square feet in the study area itself. Given the large majority of

| | 2010 - 2015 | 2015 - 2020 | 2020 - 2025 | 2025 - 2030 | (|
|--|-------------|-------------|-------------|-------------|---|
| | | | | | : |
| Midtown/Randolph/South End Capture Rate | 5.0% | 9.0% | 11.0% | 12.0% | 1 |
| Estimated Midtown Office Demand (Square Feet) | 277,576 | 673,023 | 753,881 | 826,441 | |
| Midtown/Morehead/Cherry Capture Rate (Based on Deliveries) | 35% | 45% | 45% | 40% | |
| Midtown-Morehead-Cherry Office Demand (Square Feet) | 97,152 | 302,860 | 339,247 | 330,576 | Ì |

demand will emanate from firms seeking less than 5,000 square feet, much of the product delivered will be in smaller spaces, including second and third story offices above retail.

Office Opportunities

From the above we believe three major office development opportunities will exist in the study area over the next two decades:

- 1. Development of midrise office buildings on underutilized sites closest to I-277 interchanges, where access and visibility are greatest.
- 2. Creation of smaller office spaces along Kings Drive, Morehead Street, and other thoroughfares in the study area, in mixed-use projects (upstairs from retail) or in smaller officer properties in areas providing the greatest lifestyle propositions.
- Delivery of medical office space on underutilized properties closest to Carolinas Medical Center and Presbyterian Hospital. Short-term demand may be satisfied by the development of a medical office building planned in Elizabeth, with demand opportunities increasing in the study area over time.

CITY OF CHARLOTTE MIDTOWN-MOREHEAD-CHERRY MARKET ANALYSIS

Noe Consulting Group

Rental Residential Market Overview

Rental residential has made a dramatic recovery over the past 12 - 18 months, bolstered by overly restrictive lending practices that have effectively shut down the nation's for-sale housing market. Indeed, 2010 saw the absorption of approximately 7,000 rental apartments, the highest annual total in Charlotte's history. That trend is a reversal of the previous decade which saw demand for rental apartments tempered by two recessions and overly

aggressive lending practices that raided apartment renters and placed them into for-sale housing.

Like the Charlotte market overall, the Intown Charlotte apartment market has done quite well, and is overcoming a glut of rental apartment deliveries in the last two years that resulted from the fallout of the condo market. Indeed, more than half of the 2,500+

| Summary of New Intown Units | New Units | Absorbed | Vacancy | Lease Rate Range |
|-----------------------------|-----------|----------|---------|--------------------|
| South End | 1,671 | 855 | 49% | \$1.15 - \$1.52/SF |
| Elizabeth | 256 | 241 | 6% | \$1.29/SF |
| Center City | 641 | 405 | 37% | \$1.38 - \$1.67/SF |
| Total Intown | 2,568 | 1,501 | 42% | \$1.15 - \$1.67 |

new units delivered in the last two years have been absorbed in fairly short order. The remaining 1,000 units will likely be absorbed in 2011 given a lack of construction and improving demand fundamentals; a situation which will allow for stronger rent growth in the coming years.

As shown in the preceding table, rents in newer intown apartment product are solid and improving; largely hitting the levels needed to support more expensive structured parking and more urban product, including projects with ground floor retail.

The Midtown-Morehead-Cherry area is very well positioned to attract significant rental apartment development in the coming years and, while lacking rail transit access today, should be able to effectively compete with other intown core areas. The study area specifically enjoys:

- Very close proximity to Center City and other intown job cores;
- Walkable distances to the two major hospitals and their related medical office cores;
- Access to the Sugar Creek Greenway, a major park and exercise trail system;
- Access to restaurants, bars and retail in the area, including at Metropolitan Midtown; and
- Major views of the Center City skyline from a number of areas within the property--views stronger than those offered in many other intown areas.

Given these strong attributes we believe demand for new rental apartments in the study area will be significant, with net demand eclipsing 2,000 units (possibly a conservative number) over the next twenty years, some of which may be delivered above retail or in mixed-use environments.

CITY OF CHARLOTTE MIDTOWN-MOREHEAD-CHERRY MARKET ANALYSIS

Noe Consulting Group

Rental Residential Opportunities

Three major opportunities emerge for the infilling of rental residential in the study area:

- The creation of a more urban neighborhood running along the greenway, particularly along Greenwood Cliff and Harding Place, two streets offering strong views of the skyline and direct adjacency to the greenway;
- Opportunities for housing related to the hospitals including employee housing and potentially seniors-oriented housing;
- 3. Housing targeting CPCC students (and possibly, over time, medical students) that is walkable to campus and/or to CMC.

For-Sale Residential Market Overview

Not surprising, the for-sale residential market has

struggled to a much greater extent in the last three years, blown out by overly aggressive lending practices and a massive housing bubble that helped to undermine the economy. Indeed the pain in the for-sale residential market is still continuing, with home prices in Charlotte returning to 2004 levels; a situation that wipes out equity many have in their homes and, while not as bad as in many markets, will have longer-lasting impacts to the area's and nation's economy. So far in 2011 home prices have continued to slide slightly with foreclosures improving, but still existing at undesirable levels, a factor that will remain in place as long as job growth in the area remains modest.

Intown Charlotte, like other urban areas, has generally fared better than the suburbs given both its convenience to major employers (built-in value retention) and the suburbs' historic appeal to the "drive for value" market; an audience that had little margin for error in the first place and one severely

| | Foreclosure | e Rates | Current Average | Est. Avg. Yr-Over-Yr | i |
|---------------------------|--------------|-----------|-----------------|----------------------|----|
| ZIP/Area | January 2011 | Fall 2009 | Home Price | Price Change | רו |
| 28204Elizabeth/Cherry | 0.03% | 0.06% | \$416,000 | 49% | a |
| 28207Elizabeth & Myers Pk | 0.09% | 0.09% | \$652,643 | 2.3% | c |
| 28202Uptown | 0.19% | 0.27% | \$326,773 | 92.2% | p |
| 28203S. End/Dilworth | 0.10% | 0.18% | \$316,292 | -7.0% | r |
| Mecklenburg County | 0.18% | 0.25% | \$207,591 | 5.4% | |

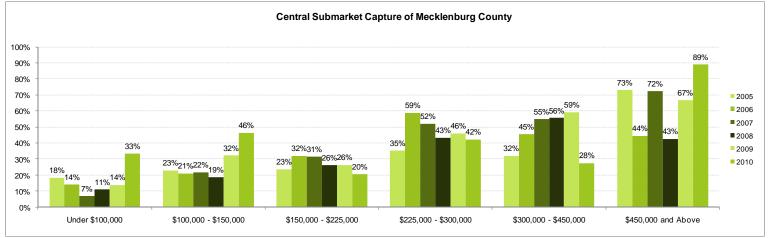

impacted by rising gas prices.

The study area and surrounding neighborhoods appear to be faring better, with foreclosure rates dropping by 50% over the past year and home prices showing increases over the past 12 months.

While opportunities for infilling single-family detached homes are very limited in Intown Charlotte, the area is highly attractive for the development of forsale condominiums and townhouses, and accounts for a large share of the attached product offered in the county. Indeed, Intown Charlotte, and specifically the areas in Center City, South End, Dilworth, Myers Park, Midtown and Elizabeth, account for more than half of all new for-sale product

sales in the entire for county units priced above \$300,000. Buyers of these products are largely younger singles and couples 40. under but includes a growing audience of Empty Nesters moving down for convenience and lifestyle.

As noted earlier, the

Midtown-Morehead-Cherry study area offers both solid convenience and lifestyle propositions to prospective buyers, offering strong access to major job cores, walkable neighborhoods, access to the greenway, and easy proximity to retail and dining opportunities in adjacent areas (although somewhat lacking in the study area itself). Creating the right opportunities will be important to capturing demand for new for-sale housing in the coming decades.

Demand for new for-sale housing is expected to be moderate over the next five years (through 2015) and improve from there, with net demand potential totaling around 1,000 new for-sale attached units and 30 net new singlefamily homes (beyond replacements) over the next two decades.

| | New For-Sal | Totals | | | |
|-----------------------------------|-------------|------------|-------------|-------------|-------------|
| | 2010 - 2015 | 2015 -2020 | 2020 - 2025 | 2025 - 2030 | 2010 - 2030 |

| New MMC Study Area Detached Homes | 7 | 8 | 8 | 6 | 30 |

Noe Group

Like rental opportunities, the greatest opportunities for new for-sale product will be those locations that can offer the strongest lifestyle play. Specific opportunities include:

- Townhouses and midrises proximate to the greenway and in areas with strong skyline views, such as Greenwood Cliff and Harding Place;
- Infill opportunities for single-family homes and townhouses within the Cherry neighborhood-conducted in a manner that is sensitive to the existing scale of the neighborhood;
- Low-rise and midrise development above retail or office along Kings Drive.

Overall Conclusions

The Midtown-Morehead-Cherry study area is very well positioned for growth in the coming decades, particularly for new residential development. The convenience of the

area, the strength of the neighborhoods, greenway and park access, and proximity to restaurants, bars and retail are all positive attributes for not only residential uses, but commercial uses as well. The key challenge in the study area will be leveraging the strong attributes of the study area itself and creating a more dynamic and cohesive atmosphere within the study area, one that appeals to future market audiences yet respects the existing attributes and neighborhoods within the study area.

Assuming such an environment can be created, we believe the market can support the development and redevelopment of more than 80 acres over the next two decades, the majority of which is for residential uses.

Exhibit 5

Retail Market Overview

National Trends/Factors

- Spending by US consumers still tight, but loosening modestly--not likely to return to growth of last 20 years.
- National chains closing marginal stores/consolidating to more strategic locations (Borders the latest)
- These locations increasingly include stable intown areas
- New models being created for more urban setting (even Walmart joining the trend)
- Large-scale fallout in commercial lending claiming poorly situated/conceptualized centers
- Lifestyle/"experiential" retail on the rise--particularly retail in more walkable formats
- Seeing more congregating of destination retail uses, including restaurants, to strengthen traffic/sales

Intown Charlotte Trends

- Trend of retail chains moving intown only gaining momentum--safe play given strong affluent population base & lack of greenfield sites
- Uptown itself tough for larger formats (block sizes, densities, land costs)
- Chains therefore opting for strategic intown locations close to freeway network/major thoroughfares

Midtown-Morehead-Cherry Trends/Conditions

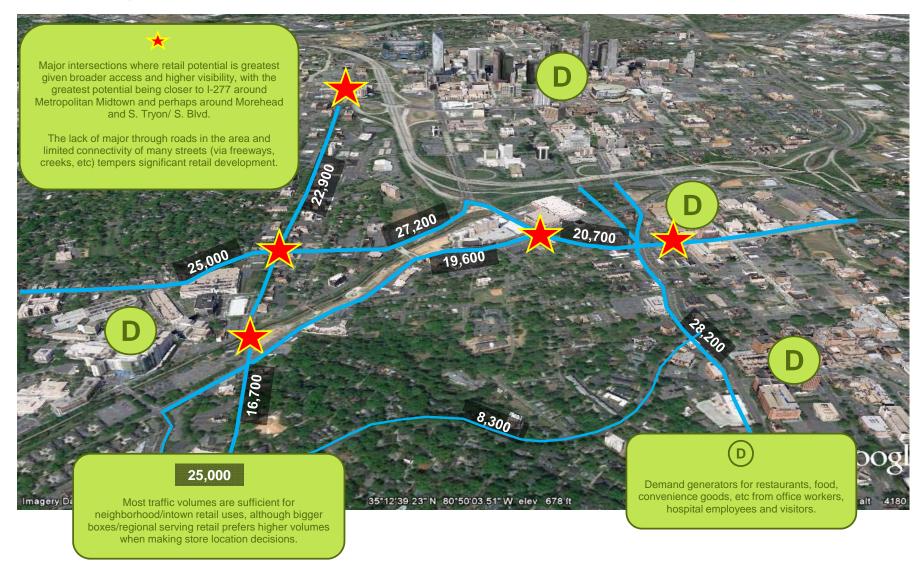

- Metropolitan Midtown first major retail in area in decades
- Area retail in an array of product types, with study area having abundant unanchored strip centers or free-standing retail
- Elizabeth Avenue project would be second major delivery--waiting to get past recession
- Likely to be an intown destination and not a regional one
- Retail supply down in past decade due to Midtown Square demo, greenway project, hospital expansion
- Area vacancy rates very high currently, running close to 20% in multitenant spaces
- Retail in study area tends to be more restaurant/entertainment oriented, with Met. MT bieng the major exception
- Land availability and traffic counts elsewhere in the study area are not ideal for large-scale retail development
- Outside of Metropolitan Midtown 80% of retail tenants and 50% of restaurant tenants smaller than 5,000
- Average rents around \$20/SF with newer space quoting \$18 \$20 for unanchored retail and Met Midtown quoting \$28 \$30/SF.

Noe Consulting Group

Exhibit 8

Intown Major Retailer and Retail Core Map

The Midtown-Morehead-Cherry area itself features very little retail outside of Metropolitan Midtown, with the bulk of retail offerings being limited service restaurants, independent boutiques, drug stores and medical or office-serving uses. Retail offerings are generally limited proximate to the study area, with only a handful of larger retail chains being within a brief drive of the study area and few options being available along transit stops. Grocery options are somewhat better, although dominated by one chain. Walk able, convenient retail is a major factor for younger singles and couples and for maturing Baby Boomers in search of a more walk able and convenient lifestyle.

Exhibit 9

Midtown-Morehead-Cherry Study Area Retail Demand, 2011 - 2030

Categories where demand exists in the next five to eight years

| Category | Suitability/Opportunity for Study Area | Comments |
|------------------------|---|--|
| Grocery Store | Good | Finding location may be a challenge |
| Clothing/Shoe Stores | Moderate | Nationals a challenge, mostly local |
| Hobby/Toy Stores | Low - Moderate | Finding tenants may be a challenge |
| Sporting Goods | Low | Shake-out occurring in category |
| Big Box Discount | Moderate | Definite opportunity, but lack of attractive locationsTryon/Morehead area possible |
| Limited Service Dining | Good | Major employers in study area, hospital visitors create opportunities |
| Personal Services | Good | Prefer smaller spaces throughout area Could be free-standing or in mixed-use |

Noe Consulting Group

Exhibit 10

Potential Retail Opportunities in the Midtown-Morehead-Cherry Study Area

While a potentially strong use, retail will see moderate growth in the study area in the coming years, with most opportunities serving local/intown residents and area employees. An exception is the potential for big boxes on underutilized land around W. Morehead & S. Tryon; a location that could accommodate big box development.

If another big box, or stack of big boxes, is to occur it would likely be around the South Tryon/Morehead area, which has high visibility and large, underutilized parcels.

Additional retail, likely more intown neighborhood-serving, could locate in and around Metropolitan Midtown, with opportunities to appeal to CPCC students with limited service dining and some eating/drinking establishments.

35°12'39.23" N 80°50'03.51" W elev

Elizabeth Avenue efforts still planned just outside of study area--mix of n'hood retail and entertainment/dining.

Potential smaller infill of retail around CMC targeting hospital visitors and some n'hood-oriented retailers.

Access/Visibility Major large-scale demand generators (hospitals, CPCC) and relatively high visibility location.

Quality Sites

Lack of major thoroughfares intersecting in study area. and lack of sites where they do connect. Freeways and street network also cut-off.

Relationship to Other Retail

Metropolitan Midtown a significant intown core. Most comparison shopping (bigger items) still occurs outside of area.

Housing/Incomes

Solid density and income levels--stable housing overall, although area still feels largely commercial and "in between".

Summary of Retail Demand

| Avg Annual New SF 2010-2030 | Avg Annual Acres 2010-2030 |
|-----------------------------|----------------------------|
| 11,631 | 0.5 |

NOTE: Acreage estimates are gross and could include intensification of existing land uses in the market and thus are not necessarily net new acres needed.

Exhibit 11

Office Market Overview

Macro Trends/Factors

- Massive job losses in professional services, financial sectors impacting office space--still slow to recover
- Commercial properties still down in value, but trading hands
- Office markets in 24-hour cities (areas) most preferred for investment--these areas are typically most walkable areas in the US
- Office locations in areas with higher quality of life preferred both for retention and attraction of employees
- Greater emphasis on walkable locations and mixed-use environments to attract strongest new talent
- Charlotte actually experienced positive net absorption overall in 2010, an encouraging sign of an improving economy

Intown Charlotte Trends

- Timing of recession corresponded with a major surge in new supply and pushed vacancy rates substantially higher
- Center City had lowest vacancy rate in US in 2008, now experiencing glut of office space
- Several newer towers opening during the recession have struggled to attract major tenants and being forced to offer reduced rent as an incentive
- Nearly 3,000,000 square feet of space hitting a down market--has cannibalized some other properties downtown--will take several years to fully absorb.

| Total | 2,857,000 sf | 531,800 sf | 81% |
|--------------------------|--------------|----------------|----------------|
| Duke Energy Center | 1,300,000 sf | 74,000 sf | 95% |
| NASCAR Plaza | 390,000 sf | 255,800 sf | 34% |
| Ally Center | 363,000 sf | 162,000 sf | 56% |
| 1 Bank of America Center | 750,000 sf | 40,000 sf | 95% |
| | Total SF | Est. Available | <u>% Occ'd</u> |

- Areas around Center City have emerged--three major sources of demand;
 - Firms seeking Center City location at price alternative
 - Firms related to hospitals, other uses nearby
 - Firms seeking funky, walkable, and/or neighborhood-oriented locations
- South End, Midtown, Elizabeth all emerging as "fringe" alternative locations to Center City
 - Health, creative firms (architects, marketing/PR firms, designers, etc) fueling markets Many of these firms are smaller in size (under 5,000 sf)
- Competition from Center City towers will compete with newer "fringe" Center City product, tempering demand for next 3 5 years

Midtown/Morehead/Cherry Area Trends/Conditions

- Office market a mix of smaller professional services firms and medical/health-related firms
- Non-health firms typically under 5,000 square feet (except in Metropolitan Midtown), health-related firms can be larger--up to 10,000 sf +
- Demand for office likely to be slow in the coming two to three years, with hospitals bringing on their own properties and Uptown towers discounting to retenant.
- Vacancy rates are generally healthy (around 10%) in the area, although shadow market may be a bit larger.
- Lease rates in newer office space in the area (Midtown/Randolph/South End) generally range from \$17 \$24/sf and need to stay priced below Uptown towers.
- The Metropolitan represents the largest multitenant offering and has performed relatively well, being 85% occupied with quoted lease rates of \$28/sf, down from 2009 levels.
- Just outside of the study area, Presbyterian is still planning a 400,000 sf office building (medically-oriented) and CMC is undertaking a 10-year program to develop a \$500M cancer insitute, with a first phase comprised of 204,000 SF building on Morehead Street.

Exhibit 16

Potential Office Opportunities in the Midtown-Morehead-Cherry Study Area

Office should be a strong land use in the study area in the coming 20 years as it increasingly serves as an attractive location for pricealternative space relative to Center City. Product offered will vary from low-rise freestanding or mixed-use product (over retail) to high-rise towers such as Metropolitan.

Maintain smaller office opportunities throughout the study area, including both freestanding offices and second floor office space above retail. Strongest opportunities for infill midrise office around interchanges that provide stronger regional access. Create mixed-use environments and identify ways to foster more cohesive development

Location

Generally strong with high visibility, adjacency to two major hospitals, freeway access, and opportunities to function as a price alternative to Center City.

Retail/Services

Relatively strong, with abundant dining opportunities, convenience, and other providers easily within reach. The area still, however, lacks true walkability and a cohesive office "quality of life", something South End is further along providing.

Housing Quality

Executive housing is immediately adjacent to the study area and is attractive to decision-makers for office locations. Lack of housing options for workers is a bit of a challenge.

Medical-oriented office around the two hospital campuses, with some need to more clearly define boundaries for that space.

NOTE: Acreage estimates are gross and could include intensification of existing land uses in the market and thus are not necessarily net new acres needed.

Exhibit 17

Rental Residential Product Overview

National Trends/Factors

- Rental product is among the stronger performing real estate products, fueled by issues in the for-sale housing market.
- Developers beginning to look for sites as existing product stabilizes --2010 was the strongest absorption year in a decade in many markets.
- Investors purchasing existing apartments given strengthening fundamentals.
- Strongest locations for rental product are convenient areas--those close to major employment cores and in walkable environments.
- Unit sizes anticipated to decrease as renters become less interested in paying for less excess space
- Condo-level finishes have become the norm in solid locations--not your old garden-style product.

Intown Charlotte Trends

- Consistent with national trends, absorption in 2010 was very strong--fueled by demand from younger singles/couples locked out/uninterested in owning.
- Overall vacancy rates are still very high intown but have improved from 2009 levels and, given the lack of new construction, should continue improving in 2011.
- After declining for close to two years due to oversupply and negative job growth, rental rates are again trending upward, increasing to an average \$1.08/SF.
- Still, rents achieve a 42% premium over Mecklenburg County apartments overall
- Absorption in the last half of 2010 was very strong for new communities coming online in South End, Elizabeth, and Center City:

| Summary of New Intown Units | New Units | Absorbed | Vacancy | Lease Rate Range |
|-----------------------------|-----------|----------|---------|--------------------|
| South End | 1,671 | 855 | 49% | \$1.15 - \$1.52/SF |
| Elizabeth | 256 | 241 | 6% | \$1.29/SF |
| Center City | 641 | 405 | 37% | \$1.38 - \$1.67/SF |
| Total Intown | 2,568 | 1.501 | 42% | \$1.15 - \$1.67 |

- Absorption will eat up remaining units in next 12 - 15 months at which point rent levels will begin to climb and new construction will likely be delivered.

- In Center City, the two products delivered at actually for-sale condos converted to rental situations due to sales issues.
- Growth being fueled by singles working intown--most in Uptown--and seeking urban lifestyle

Midtown/Morehead/Cherry Area Trends/Conditions

- Very little modern rental product existing in the area today, in spite of the very strong location
- South End and Elizabeth Square represent the strongest analogs with 4 5 story product performing better than high-rise product.
 - Leasing well with somewhat discounted rents, but still achieving solid rates.
- Adjacent to the study area, Grubb is planning potential rental product at its Elizabeth Street mixed-use project.
- To date no rental product has been incorporated into a solid mixed-use project in the study area.
- No product has been rolled out targeting hospital employees
- No product has been rolled out targeting CPCC students

Exhibit 18

Factors Impacting Potential Rental Residential Development Opportunities

The Midtown-Morehead-Cherry study area represents a very strong location for the development of new, higher-density residential development, bolstered by its unparalleled access to jobs, regional accessibility, strong access to parks and greenways, and strong skyline views. New rental product should largely be delivered in the form of midrise product likely wrapping a parking structure.

Highly affluent neighborhoods surrounding the study area enhance attractiveness of area for rental multifamily housing, providing stable housing environment, great places to walk/run, and the need for price-alternatives.

35°12'39.23" N 80°50'03.51" W elev 678 ft

Strong skyline views create a relatively unique selling proposition along and off of Morehead Street and on Greenwood Cliff/Harding Place. Also creates premium opportunities that may justify higher construction costs.

The greenway represents a major amenity orientation also largely unique in the market and potentially meriting strong premiums for residential. Could function as a spine for more dense residential in the study area. Strong medical access, walkable neighborhoods and an aging intown population create opportunities for seniors housing in the area.

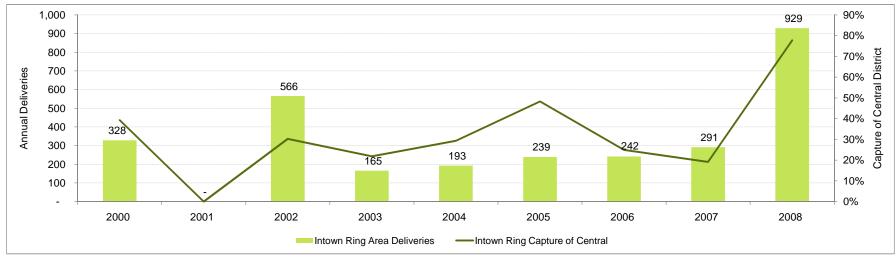

They also provide huge opportunities for employee housing within a short walk, streetcar ride and/or drive.

| New Renter HH Growth in Midtown/Morehead/Cherry | 337 | 207 | 395 | 573 | 534 | 532 | 2,034 | | | |

The Midtown/Morehead/Cherry area has all of the attributes attractive to renters in the coming years: access to jobs (hospitals and Center City), adjacency to stable neighborhoods, access to parks and greenways, superior freeway access, skyline views, and high proximity to groceries and other retail.

Given this, demand potential in the study area is very high, averaging more than 100 units annually over the next 20 years.

Projected household growth via population projections provided by MUMPO Renter propensities from US Census Bureau Captures based on historic and current trends and estimates of where those captures will trend going forward. Estimated demand potential estimates are gross and do not net out projects planned or in the pipeline.

SOURCE: Noell Consulting Group

Exhibit 24

Factors Impacting Potential Rental Residential Development Opportunities

The study area is ideally situated for infilling rental residential, particularly in areas where underutilized commercial properties exist; properties that are not consistent in some cases with major investments recently made in the study area.

Infill residential along Greenwood Cliff & Harding as well as along Baxter to take advantage of great views, greenway/park access, and regional access. Consider opportunities with CPCC for new student housing walkable to campus.

Noe Consulting Group

<u>Location</u> Highly accessible to a range of demand generators and a very convenient location.

Retail/Services/Amenities

Access to the greenway a big plus, as is proximity to grocery, shopping, and dining opportunities. Little is offered in a walkable environment though. Strong skyline views in several areas.

Housing Quality

Plenty of stable neighborhoods adjacent to provide extend residential character into newly redeveloping areas.

Land Supply

Abundant underdeveloped properties in the area attractive for redevelopment.

Consider targeted housing for hospital employees, residents, and seniors where medical meets residential.

Rental Res. Opportunities 3/17/2011

For-Sale Residential Product Overview

Macro Trends/Factors

- Home prices in the largest US housing markets are still showing weakness, with 11 of 20 markets surveyed hitting new lows in the past five years.
- Home prices in Charlotte are now back to 2004 prices which, while painful, still represents an improvement on markets like Atlanta, which are now back to pre-2000 levels.
- Economists do not expect housing market conditions to improve significantly in the near-term, with gradual improvements occurring in 2011, 2012, and 2013.
- Pain in the housing market has been focused largely at the more moderate end of the spectrum, particularly in the starter market as many who cannot afford new home ownership have been able to purchase new or existing homes and have subsequently given those homes back to the bank.
- The suburbs is most metros, including Charlotte, have largely been hit harder than intown areas given many buyers "drive for value" and are most susceptible to downturns in the market. Rising gas prices could inflict further pain on homeowners on the suburban fringe.
- Home prices in Mecklenburg County have generally stabilized or have fallen slightly, with median home prices showing minor declines and average home prices actually increasing, a sign that the high-end is recovering more quickly than more affordable product.

Intown Charlotte Trends

- Intown Charlotte home prices continue to fare relatively well, with most neighborhoods surrounding the study area showing increases in sales prices. Dilworth has seen some continued drop-off
- This is in part due to the significant drop-off in foreclosures intown, with neighborhoods around the study area generally seeing foreclosure rates drop by roughly 50% from the levels seen in late 2009.

| | Foreclosure | e Rates | Current Average | Est. Avg. Yr-Over-Yr | |
|---------------------------|--------------|-----------|-----------------|----------------------|--|
| ZIP/Area | January 2011 | Fall 2009 | Home Price | Price Change | |
| 28204Elizabeth/Cherry | 0.03% | 0.06% | \$416,000 | 49% | |
| 28207Elizabeth & Myers Pk | 0.09% | 0.09% | \$652,643 | 2.3% | |
| 28202Uptown | 0.19% | 0.27% | \$326,773 | 92.2% | |
| 28203S. End/Dilworth | 0.10% | 0.18% | \$316,292 | -7.0% | |
| Mecklenburg County | 0.18% | 0.25% | \$207,591 | 5.4% | |

Note: Home prices shown at left are average prices. Overall, median prices in Mecklenburg County have declined by a little less than 1% from January 2010.

Noe Consulting Group

Midtown/Morehead/Cherry Trends/Conditions

The Midtown/Morehead/Cherry study area has been a relatively stable housing market overall, with foreclosure rates generally remaining low and home prices remaining relatively stable over the past year.

- Product in the study area varies significantly, with most single-family homes being relatively affordable in the Cherry neighborhood, and newer product being in condos in higher-end properties such as Metropolitan Midtown and Royal Court.
- While having major employment concentrations that span a huge range of incomes, very few employees in the area actually live close to work, with younger households, those under the age of 30, having the greatest proclivity to buy or rent in the area.
- The hospitals in particular represent major sources of potential buyers in the area and could represent an opportunity to initiate some type of program to encourage
- employees to buy (or rent) nearby.

Noe Consulting Group

Exhibit 26

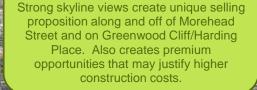

Factors Impacting Potential For-Sale Residential

As with rental, the Midtown-Morehead-Cherry study area represents a very strong location for the development of new infill for-sale residential of all product types, from single-family infill in the Cherry neighborhood to townhouses and condos along the greenway, where views are strongest, and adjacent to stable neighborhoods.

Areas adjacent to stable single-family neighborhoods attractive for infill attached for-sale product as a price-alternative.

Retail, including grocery, highly attractive as an amenity within walking distance.

The greenway represents a major amenity orientation also largely unique in the market and potentially meriting strong premiums for residential. Could function as a spine for more dense residential in the study area.

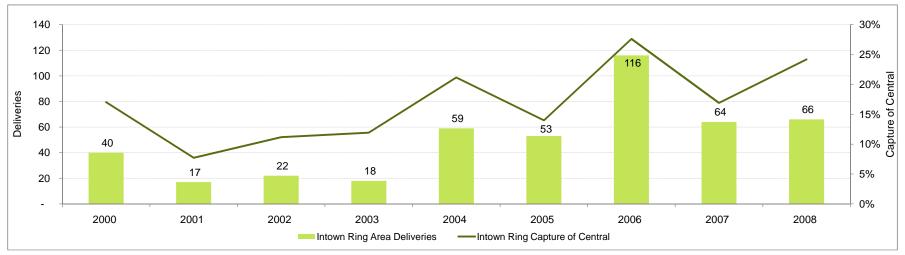

Vacant lots in Cherry ideal for single-family and/or townhouse infill, depending on the location. Strong medical access, walkable neighborhoods and an aging intown population attractive for independent/ active adult and age-targeted products.

They also provide huge opportunities for employee housing within a short walk, streetcar ride and/or drive.

As with rental apartment product, the Midtown/Morehead/Cherry study area represents an ideal location for the infill of new, for-sale residential housing. This includes opportunities for infill single-family homes in the Cherry neighborhood to townhouses and mid-rise condos in higher-visibility areas and those that benefit the most from walkable access to the greenway, groceries and shopping, and great skyline views.

Annual demand for new attached products is estimated to average around 50 units in the study area, with detached for-sale residential demand averaging around 2 homes annually. While potential demand could easily exceed this amount, supply and the ability to deliver market-rate product temper achievable demand levels.

NOTE: Demand estimates are gross and do not net out planned projects or those in the pipeline. Source: Noell Consulting Group based on data obtained from MORE and the Charlotte-Mecklenburg Planning Department

Exhibit 31

Potential For-Sale Residential Opportunities in the Midtown-Morehead-Cherry Area

As with rental residential, the study area is ideally situated for infilling a variety of for-sale residential products, from single-family homes to high-rise residential, provided infilling is done in the proper context. Where possible incorporate residential into mixed-use projects.

Noe Consulting Group

Infill residential along Greenwood Cliff & Harding as well as along Baxter to take advantage of great views, greenway/park access, and regional access.

Location Highly accessible to a range of demand generators and a very convenient location.

Retail/Services/Amenities

Access to the greenway a big plus, as is proximity to grocery, shopping, and dining opportunities. Little is offered in a walkable environment though. Strong skyline views in several areas.

Housing Quality

Plenty of stable neighborhoods adjacent to provide extend residential character into newly redeveloping areas.

Land Supply Abundant underdeveloped properties in the area attractive for redevelopment.

Pursue infill opportunities for single-family homes and lower-density townhouses in appropriate locations in the neighborhood.

 Summary of For-Sale Residential Demand

 Avg Ann. New Units 2010 - 2030
 Avg Annual Acres 2010-2030

 50
 1.4

Consider opportunities for development of low-rise, midrise and possible high-rise along greenway, where appropriate and with sensitivity to neighborhoods.

NOTE: Acreage estimates are gross and could include intensification of existing land uses in the market and thus are not necessarily net new acres needed.

For-Sale Res. Opportunities 3/17/2011

 NOTE: Acreage estimates for all land uses are gross and could include intensification of existing land uses in the market and thus are not necessarily net new acres needed.

Demand estimates should be considered gross and do not net out projects planned or in the pipeline. In some cases, short-term captures have been reduced to account for significant oversupply that exists today (e.g. Uptown office space & condominiums).
