Please find below the Land Use and Environmental Services Agency comments on Petitions 2017-127 through 2017-141 from Air Quality and Groundwater & Wastewater Services (GWS):

Purpose of Mecklenburg County Air Quality Review:
Mecklenburg County Air Quality (MCAQ) has reviewed the City of Charlotte November 2017 rezoning petitions 2017-127 through 2017-141 to identify regulatory requirements of the petitioner, inform the petitioner, planning staff and other affected parties of such regulatory requirements, and identify potential effects on, and impacts from, nearby properties.

Scope of Review:
MCAQ has reviewed the petitions with regard to air quality regulations for stationary sources and demolition and/or renovation of structures (e.g. National Emission Standards for Hazardous Air Pollutants for asbestos). Comments may also be made regarding incompatible land uses, sources of Toxic Air Pollutants, proximity to Risk Management Plan facilities, and proximity to known nuisance conditions or sensitive populations. MCAQ has conducted the review based on information submitted by the petitioner, a review of aerial photographs (as available through the Mecklenburg County Polaris system), and a review of the “Air Pollution Facility Information Online” database available from the MCAQ website. The review is cursory based on limited information.

Groundwater & Wastewater Services (GWS) Comments

Petitions 2017-127, 128, 130, 131, 134, 136, 138, 139, 140 & 141
GWS records indicate a contamination site(s) exist on or within 1,500 feet of the properties included in the petitions. An established Area of Regulated Groundwater Usage (ARGU) as defined by the Mecklenburg County Groundwater Well Regulations extends 1,500 feet around the contamination sites. In ARGU where municipally supplied water is available water supply wells for water supply, irrigation or open loop geothermal systems may not be permitted or constructed on or within 1,000 feet of contamination sites. Wells may be permitted with special construction and sampling requirements between 1,000 and 1,500 feet of contamination sites.
