General Review Information
The site is on W WT Harris Blvd (major thoroughfare); with proposed access through the existing signal at W WT Harris Blvd & I-485 ramp. The site is located in a wedge outside Route 4 and is within the limits of the Northlake Area Plan.

CDOT’s review of this rezoning petition is intended to ensure consistency with the Transportation Action Plan (TAP) which seeks to ensure that the City’s transportation network supports current and future land uses and includes streets that provide safe and comfortable mobility for motorists, pedestrians, bicyclists, and transit users.

This document is primarily for communication to Planning Department staff as part of the overall City staff analysis of the rezoning petition and includes an overall summary of the case from a transportation perspective, information on trip generation, and resolved or outstanding site plan concerns. Additional advisory information about the driveway permit process is provided for information only.

Based on our review of the petition, we offer the following information for your consideration.

Transportation Summary
To be provided prior to public hearing.

Trip Generation

Outstanding Issues

1. Traffic Study: A Traffic Impact Study/Transportation Technical Memorandum is needed for the complete review of this petition. A Traffic Impact Study has been submitted to CDOT and NCDOT. Comments were provided to the traffic consultant on 7/28/17. The following items remain outstanding:
a. Include Lake Spring, Treyburn, and Northcrest as study intersections along WT Harris because any operational decreases at the interchange ramp intersection will have impacts on the larger corridor.
b. Remove growth rate from analysis or use 2% applied once (not per year) if necessary.
c. Recommend an extension of the NB right/outside lane on WT Harris at MHH to respond to increase queuing reported in PM peak.
d. The first driveway into the site is too close to the signalized intersection. Provide a minimum 250’ internal protected stem with a three lane section at a traffic signal or two ingress lanes with a minimum 150’ internal protected stem with a dedicated left lane into the first access drive.
e. Please provide more detail on the location of the other proposed uses within the site as the location of each use will determine the stem conditions at the signalized intersection.

2. The petitioner should revise the site plan and conditional note(s) to revise the proposed southbound approach right turn lane. The large curb radii shown in the conceptual geometrics does not align with CDOT goals to provide a safe pedestrian crossing and should be reduced.

3. The petitioner should revise the site plan and conditional note(s) to show a 44’ planting strip and 14’ shared-use path (SUP) along the site’s WT Harris Blvd. frontage to accommodate the future widening of WT Harris and the streetscape envisioned by the area plan. The MUP should extend to Lake Spring and to the 485 ramp, including proper accessible ramps.

4. The petitioner should revise the site plan and conditional note(s) to commit entering into a Developer’s Traffic Signal Agreement with CDOT, responsible for all costs to modify the existing traffic signal located at I-485 exit ramp/WT Harris Blvd associated with adding the fourth signal approach.

5. The petitioner should revise the site plan to add a note specifying dedication and fee simple conveyance of all rights of way to the City before the site’s first building certificate of occupancy is issued. CDOT requests right of way set at 2’ behind back of sidewalk where feasible.

6. The petitioner should revise the site plan to add a note detailing each transportation improvement and specifying all transportation improvements, as identified in the rezoning document and the signed/sealed approved and approved by NCDOT TIA, will be approved and constructed and that all items as specified in NCDOT’s letter dated November 15, 2017 must be met before the site’s first building certificate of occupancy is issued. The petitioner may phase transportation improvements if said improvements and phasing are explicitly described in site plan notes.

Advisory Information
The following are requirements of the developer that must be satisfied prior to driveway permit approval. We recommend that the petitioner reflect these on the rezoning plan as-appropriate.

1. According to the City of Charlotte’s Driveway Regulations, CDOT has the authority to regulate/approve all private street/driveway and public street connections to the right-of-way of a street under the regulatory jurisdiction of the City of Charlotte.

2. Adequate sight triangles must be reserved at the existing/proposed street entrance(s). Two 35’ x 35’ sight triangles (and two 10’ x 70’ sight triangles on North Carolina Department of Transportation on NCDOT maintained streets) are required for the entrance(s) to meet requirements. All proposed trees, berms, walls, fences, and/or identification signs must not interfere with sight distance at the entrance(s). Such items should be identified on the site plan.

3. The proposed driveway connection(s) to public streets will require a driveway permit(s) to be submitted to CDOT (and the North Carolina Department of Transportation on NCDOT maintained streets) for review and approval. The exact driveway location(s) and type/width of the driveway(s) will be determined by CDOT during the driveway permit process. The locations of the driveway(s) shown
on the site plan are subject to change in order to align with driveway(s) on the opposite side of the street and comply with City Driveway Regulations and the City Tree Ordinance.

4. All proposed commercial driveway connections to a future public street will require a driveway permit to be submitted to CDOT for review and approval.

5. Any fence or wall constructed along or adjacent to any sidewalk or street right-of-way requires a certificate issued by CDOT.

6. A Right-of-Way Encroachment Agreement is required for the installation of any non-standard item(s) (irrigation systems, decorative concrete pavement, brick pavers, etc.) within a proposed-existing City maintained street right-of-way by a private individual, group, business, or homeowner's/business association. An encroachment agreement must be approved by CDOT prior to the construction/installation of the non-standard item(s). Contact CDOT for additional information concerning cost, submittal, and liability insurance coverage requirements.
