**Comments:**

Charlotte Water has accessible water system infrastructure for the rezoning boundary via an existing 6-inch water distribution main located along Ellison Street and via an existing 2-inch water distribution main located along Welker Street.

The proposed rezoning is located in an area that Charlotte Water has determined to have limited sanitary sewer system capacity. Charlotte Water does not concur with the rezoning based upon the limited project information available. It is recommended that the applicant contact the Charlotte Water New Services at (704) 432-2854 for further information and to discuss options regarding sanitary sewer system capacity.

Development is encouraged to contact Installation Development Services at (704) 336-5499 to review service connection design requirements and City Ordinances (e.g., backflow, separate meter Ordinance, public/private pipeline extensions). Comments: Submit application to the Capacity Assurance Program. Send plans to our Donated Project Section for sewer relocation/abandonment. Charlotte Water has a sewer main and easement that runs through the property. No permanent structures allowed in this area. Cutting/fill inside sewer easement will need approval from Charlotte Water.

Reservation of sanitary sewer system capacity through the Charlotte Water's Capacity Assurance Program is the responsibility of the customer/development. Contact the New Services Group at (704) 432-2854 for further information on reserving capacity up to 24 months.

This sheet indicates the findings of a cursory review of Utilities System Information for the presence or absence of public water or wastewater infrastructure only. The findings do not imply available capacity in water and sanitary sewer lines, pump stations, or treatment facilities. Reservation of capacity is achieved through the Charlotte Water's Capacity Assurance Program.
